

Please Read This Before You Install

Requirements:

- Macintosh: OSX 10.9 Mavericks or higher
- Windows: Microsoft Windows 7 or higher
- VST plugin requires host with support for VST 2.4 or higher
- Audio Unit requires host with support for "Cocoa" based AU plugins

Omnisphere Software 2.3.2h

- Fixes issue where sustain pedal could trigger Synth sound if KeyTracking was Off
- Fixes issue where sustain pedal up/down events could interfere with LFO triggers and modulation.
- Fixes issue regarding rare possibility of crash in Arpeggiator
- Fixes minor memory leak

Version History:

The previous updates included the following features and fixes:

2.3.2f

- New button on Soundsource Zoom pane to control whether or not pedal sounds go thru Effects rack
- Knob controls: increase sensitivity of Shift key for finer adjustments
- Increase limit on number of custom controls on GUI for Keyscape patches
- Permit modulating filter Cutoff with monophonic mod envelope via right-click "Modulate with Envelope"
- Fixes issue with Harmonizer Mix where dry signal for synth sounds was always output
- Fixes issue when modulating Arp speed where modulation was not applied to new notes
- Fixes issue where "Install .omnisphere" action did not correctly list items in browser when finished
- Fixes issue of a rare crash related to Sample File Server
- Fixes issue where Speed slider on Filter Envelope Zoom was not responding to modulations while a note is playing
- Fixes issue where adjusting Filter knobs (Cutoff, Res, etc) while the filter envelope was looping caused audio artifacts
- Fixes issue where Analog Chorus effect can produce audio glitches if chorus Warmth is enabled and a Juicy LP filter enabled and square synth wave playing
- Fixes issue where "Lock All" Sound Lock on browser would prevent Soundsources from changing

- Fixes issue where dropping a User Audio WAV file into Layer B would load it into Layer A after import completed

2.3.1

- Mac installer fully functional on MacOS 10.12 Sierra
- Enhanced Windows installer
- Fixes issue with Clock Speed menu where it would not show "Normal" setting after selecting a setting other than "Normal"
- Fixes issue where "Redo" option could be improperly displayed

2.3.0h

- Compatibility with Keyscape
- Redo/Undo functionality
- Collapse/Expand Mini Browser
- Mini Browser Ratings
- Streaming improvements
- Note Stealing improvements
- Progressive Loading improvements
- Add new "Custom Tab Reset" user preference button on System pane
- Aux Rack FX Return is modulatable
- Fixes "Error 7400" issue in Pro Tools 10
- Fixes issue where Mac installer could crash or fail on OSX 10.12 Sierra
- Fixes issue where Mac media installer could prompt user to insert volume B several times

2.2.0g

- Bypass all effects by pressing the LED below FX button
- Move effects within effects rack by dragging
- Phase invert button on sublayer mixer in Soundsource Zoom
- Latch mode: terminate all notes when host transport is stopped
- Improved Browser performance
- Improved Patch-loading time on Windows
- Fixes crash when bouncing/freezing large amount of compressed audio files
- Changing effect type was not clearing out the effect's mod matrix slots
- Fixes bug where Ultrachorus effect could create excessively-loud volumes
- Fixes bug where Chorus Echo effect delay time could be wrong after changing host sample rate
- Fixes bug in Toxic Smasher effect where it could produce an unwanted "chirp" sound at end of notes
- Fixes issue with Doubling Power Chords Patch
- Fixes issue with notes terminating if Solo is enabled and sustain pedal is depressed
- After dropping a MIDI groove into Arpeggiator, some groove indicators were not being displayed

2.1.0d

- Improved GUI popup time
- New "Publish Library" feature
- Improvements to sharing features
- On/Off buttons for Osc modules in Layer Pages
- User Audio Import: unique-ify name rather than overwrite existing sound
- Show "N/A" in Harmonia Zoom osc menus when using sampled source
- Clear all Sound Lock checkmarks when Multi or Patch is Initialized
- Sound Match does not switch to All directory in Mini Browser
- Sample Thinning not recalling properly
- Header graphics can get into confused state
- Plugin hangs loading impulse file in a certain way
- Mini Mod Matrix becomes inoperative in certain situations
- Crackling sound in Bass Feeder Patch
- Ultra Chorus rate change causes unwanted delay in Ableton Live
- Waveshaper "AMP" audio path can cause audio glitches (Windows only)
- Improperly highlighted keys in Stack pane

2.0.3d

- Round Robin menu on System pane always did Sequential
- Mod Matrix target menu text can be too wide for text box
- Browser Directory text can extend past box if directory name is long
- Rare deadlock on startup related to lock governing memory usage text update
- Cannot create Smoke Amp FX in a Multi FX rack

2.0.2d

- Adds user preference in Browser Settings to select if Mini-Browser should respond to up/down arrow keys
- Fixes crashes when close plugin in a certain way, related to Trilian Controls
- Ensure that Start slider range behavior is consistent and accurate
- Crash related to Frequency Slider on FM page
- Hosts stop playing audio sporadically when impulse files used in Effects rack

2.0.1c

- All knob & slider parameter displays show value 1.000 when Arp Swing is modulated
- Aftertouch has different reset behavior than v1.5
- Crash related to User Preferences when running 2 or more instances
- Problem restoring arpeggiator sequences which have rests and have the length parameter turned down
- Windows non-English-language computers permissions issue
- Tempo in effects that had Sync option was not initialized properly with host tempo value
